

1. Overview

This plugin displays a result screen at the end of battle.

- The result screen can display experience, rewards, dropped items, level ups, learned skills, and more.
- You can configure window positions, sizes, transparency, and the types, positions, text, and images of displayed items in detail.
- You can set background images, actor images, and display effects for the result and level up screens.
- The result screen can also be displayed on the map using a plugin command.
- Supports extension plugins such as NUUN_ResultExpCircularGauge and NUUN_ResultSpriteHideEx.

2. Installation

1. Place NUUN_ResultEx.js in your project's js/plugins folder.
2. Enable NUUN_ResultEx in the Plugin Manager.
3. Configure the window positions, display items, background images, and other settings you want to use.
4. When using extension plugins, place them below NUUN_ResultEx.

To use the circular EXP gauge, NUUN_CircularGauge or NUUN_ResultExpCircularGauge is required separately. To use [Apply Standing Picture Display EX], NUUN_ActorPicture is required separately.

3. Controls

Control	Description
OK Key	Switches pages. If no actors leveled up, closes the result screen.
Cancel Key	Switches pages. If [Close Results with Cancel] is ON, closes the result screen.
Q / W Keys	Switches between the Drop page and Learned Skills page.

4. Basic Settings

Item	Description
Result Screen Delay After Victory (Frames)	Specifies the number of frames before the result screen appears after victory. Set to 0 to display it immediately when the battle ends.
Level Up Value Color	Specifies the color of the level value when leveling up.
Close Results with Cancel	When ON, the Cancel key closes the result screen. When OFF, it performs the same action as the OK key.
Result Skip Switch	The result screen is not displayed while the specified switch is ON.
Skip Level Up Screen	Skips the level up screen while the specified switch is ON.
Disable Post-Victory Motion Switch	Specifies the switch used to control the victory motion after battle.
Disable Victory ME/BGM Switch	Victory ME and BGM are not played while the specified switch is ON.
EXP Gauge Method Name	Specifies the method name used by the EXP gauge.

5. Window Position Settings

Item	Description
Help Window Settings	Sets the X coordinate, Y coordinate, width, and number of rows for the Battle Result Help Window.
Level Up Help Window Settings	Sets the X coordinate, Y coordinate, width, and number of rows for the Level Up Help Window.
Experience Window Settings	Sets the X coordinate, Y coordinate, width, and height of the Experience Window.
Rewards Window Settings	Sets the X coordinate, Y coordinate, width, and number of rows for the Rewards Window.
Drop Window Settings	Sets the X coordinate, Y coordinate, width, and number of rows for the Drop Window.
Level Up Window Settings	Sets the X coordinate, Y coordinate, width, and number of rows for the Level Up Window.
Learned Skills Window Settings	Sets the X coordinate, Y coordinate, width, and number of rows for the Learned Skills Window.

6. Help Window

Item	Description
Show Battle Result Help Window	Sets whether to display the Battle Result Help Window.
Transparent Battle Result Help Window	Makes the Battle Result Help Window background transparent.
Battle Result Display Text	Sets the text displayed for the battle result. Control characters can be used when Alignment is set to [Control Characters Allowed].
Alignment	Select Left, Right, Center, or Control Characters Allowed (Left).
Show Level Up Help Window	Sets whether to display the Level Up Help Window.
Transparent Level Up Help Window	Makes the Level Up Help Window background transparent.
Level Up Display Text	Sets the text displayed when leveling up. Control characters can be used.

7. Experience Window

Item	Description
Experience Display Contents Settings	Configures the items and layout displayed in the Experience Window.
Show Experience Window	Sets whether to display the Experience Window.
Transparent Experience Window	Makes the Experience Window background transparent.
Actor Display Columns	Sets the number of columns used to display actors.
Actor Display Rows	Sets the number of rows used to display actors.
Show Reserve Members	Displays reserve party members in the Experience Window.
EXP Gauge/Value Update Frames	Specifies the number of frames over which the EXP gauge and values are updated.
Obtained EXP Value Prefix	Sets the text displayed before the obtained EXP value.
Level Up Text Color	Sets the text color of the level up display. This does not apply when an image is configured.
Level Up SE	Sets the SE played when leveling up.
Gauge Maximum Value Font Size	Specifies the maximum-value font size as an offset from the main font size when displaying current/max values.
Maximum Value Y Adjustment	Adjusts the Y coordinate of the maximum value.
Slash Y Adjustment	Adjusts the Y coordinate of the "/" displayed between the current and maximum values.
Level Up Image Effect	Configures the image effect used with [Level Up EX].

8. Experience Display Contents

In [Experience Display Contents Settings], you can select the items to display and configure the column/row position, relative coordinates, width, font, image, and other settings for each item. The symbols shown with each item name indicate which settings can be used for that item.

Display Item	Description
Name Only	Displays a custom name.
Face Graphic	Displays the actor's face graphic.
Character Sprite	Displays the actor's character sprite.
Side-View Actor	Displays the side-view actor image.
Actor Image	Displays the specified actor image.
Actor Name / Nickname / Class	Displays the corresponding actor information.
Level	Displays the current level.
Level Up	Displays the level up indication.
Level Up EX	Displays a level up effect using an image.
State	Displays the actor's states.
Custom Parameter	Displays a custom value using a JavaScript evaluation formula or text.
Obtained EXP	Displays the obtained experience.
Experience Gauge	Displays experience as a gauge.
Experience Circular Gauge	Displays experience as a circular gauge. NUUN_CircularGauge or NUUN_ResultExpCircularGauge is required separately.
Image	Displays a specified image.
Fill	Fills the specified area with the specified color.
Line	Displays a horizontal line.

9. Common Display Item Settings

Item	Description
X Display Column Position (x)	Specifies the display column position.
Y Display Row Position (y)	Specifies the display row position.
X Coordinate (Relative) (xc)	Specifies the relative X coordinate based on the X display column position.
Y Coordinate (Relative) (yc)	Specifies the relative Y coordinate based on the Y display row position.
Item/Gauge Width (iw)	Specifies the width of the item or gauge. Set to 0 to use the default width.
Item Name Width (sw)	Specifies the width of the item name. Set to 0 to use the default width.
Name (pn)	Sets the item name to display.
Item Name Text Color (sc)	Specifies the item name color. Color codes can also be entered in the Text tab.
Alignment (a)	Select Left, Right, or Center.
Font Size (fs)	Specifies an offset from the main font size.
Item Name Font (ff)	Sets the font used for item names.
Value Font (vf)	Sets the font used for values.
Evaluation Formula or Text (ev)	Sets a JavaScript evaluation formula or text.
Decimal Places (d)	Sets the number of decimal places to display.
Semi-Transparent Reserve Member Image (bo)	Makes images of non-battle members semi-transparent.
Opacity (o)	Specifies the opacity of the display item.
Use Original Processing (op)	Uses the original drawing process. Some item settings will not apply in this mode.

10. Rewards Window

Item	Description
Rewards Display Contents Settings	Configures the contents and layout displayed in the Rewards Window.
Transparent Rewards Window	Makes the Rewards Window background transparent.
Rewards Window Max Columns	Sets the maximum number of columns in the Rewards Window.
Battle Time Seconds Variable	Specifies the game variable used to store battle time in seconds.

11. Drop Window

Item	Description
Drop Display Contents Settings	Configures the contents and layout displayed in the Drop Window.
Transparent Drop Window	Makes the Drop Window background transparent.
Drop Window Max Columns	Sets the maximum number of columns.
Multiple Column Display Mode	Selects one-column or two-column display.
Drop Item Display Rows	Sets the number of rows used to display dropped items.
Quantity Prefix	Sets the text displayed before the dropped-item quantity.

12. Level Up Window

Item	Description
Level Up Display Contents Settings	Configures the contents and layout displayed in the Level Up Window.
Level Up Window Max Columns	Sets the maximum number of columns.
Transparent Level Up Window	Makes the window background transparent.
Increase / Decrease Value Color	Sets the value colors used for parameter increases and decreases.
Difference Display Text	Sets the text used to display the difference. Use ¥RC for the difference text color and ¥PV for the difference value.
Before / After Level Up Parameters	Adjusts the X coordinates and widths of the values before/after level up, the arrow, and the difference value.

13. Learned Skills Window

Item	Description
Learned Skills Display Contents Settings	Configures the contents and layout displayed in the Learned Skills Window.
Learned Skills Window Max Columns	Sets the maximum number of columns.
Multiple Column Display Mode	Selects one-column or two-column display.
Learned Skills Display Rows	Sets the number of display rows.
Transparent Learned Skills Window	Makes the window background transparent.
Learned Skills Window Display Mode	Select Hide, Show, or Show Only When a Skill Is Learned.

14. Audio Settings

Item	Description
Victory BGM	Specifies the BGM played after a battle victory.
BGM Playback Position During ME	Specifies, as a percentage, the point during ME playback at which BGM playback begins.
Disable Victory BGM Switch	The victory BGM is not played while the specified switch is ON.

15. Actor Images

Item	Description
Displayed Actor Settings	Configures the actor whose image is displayed on the result screen.
Apply Standing Picture Display EX	Applies image changes from NUUN_ActorPicture's Standing Picture Display EX.
Actor Image X / Y Coordinates	Sets the base coordinates of the actor image.
Actor Effect	Configures effects when displaying the actor image. The first entry in the list is treated as the initial display.

16. Background Settings

Item	Description
Background Image UI Size	Fits the background image to the UI size.
Result Background Image	Specifies the result screen background image. It is displayed behind the actor image.
Level Up Background Image	Specifies the level up screen background image. It is displayed behind the actor image.
Result Background UI Image	Specifies the result screen background UI image. It is displayed in front of the actor image.

17. Option Settings

Item	Description
Result Window Mode (Battle Only)	Displays the result screen in Window or Normal mode. If a background image is configured, Normal mode is used.
Windows/Sprites Hidden During Results	Specifies the object variables of windows or sprites in Scene_Battle to hide while the result screen is displayed.

18. Note Tags

The following tag can be entered in the Note field of items, weapons, and armor.

`<NoResultDropList>`

Items, weapons, and armor with this tag will not be displayed in the obtained-item drop list.

The following tag can be entered in the Note field of skills.

`<NoResultLearnSkillList>`

Skills with this tag will not be displayed in the learned-skill list.

19. Parameters Available in Evaluation Formulas

Item	Description
actor	References the actor's game data.
dactor	References the actor's database data.
v	References game variables. Example: v[2] gets the value of game variable 2.

20. Plugin Commands

Command	Description
Change Victory BGM	Changes the BGM played after battle victory. Execute this during battle.
Change BGM Playback Position During ME	Changes the point during ME playback at which BGM playback begins. Set to -1 to disable this setting.
Show Results on Map	Displays the result screen on the map. You can specify level-up-only display, obtained gold, experience, items, weapons, armor, and other obtained parameters.

Log

8/23/2026 Ver.1.3.0

Fixed processing related to dynamic numeric image display. Added Fill to display items.

8/23/2026 Ver.1.2.6

Minor fixes.

8/22/2026 Ver.1.2.5

Fixed an error when configuring custom parameters, parameter text, and image display when no actor effect was configured.

8/15/2026 Ver.1.2.4

Fixed image selection in item settings, execution of the original processing for some items, and compatibility with NUUN_SkillTree Ver.1.9.0 and later.

7/20/2026 Ver.1.2.3

Fixed an issue where the victory BGM played after a defeat when defeat was allowed.

7/18/2026 Ver.1.2.2

Fixed post-victory motion and victory ME/BGM playback when defeat is allowed.

6/21/2026 Ver.1.2.1

Fixed a display issue with the level up effect while scrolling. Added processing for NUUN_ResultBattleEvaluation.

6/20/2026 Ver.1.2.0

Added Level Up EX to the Experience Window item settings.

6/3/2026 Ver.1.1.5

Added support for NUUN_ResultExpCircularGauge.

5/3/2026 Ver.1.1.4

Fixed an error when HP (without equipment modifiers) was selected in Level Up Display Contents Settings.

4/27/2026 Ver.1.1.3

Fixed the Change Victory BGM command and battle time display on the map.

4/26/2026 Ver.1.1.2

Added support for displaying obtained SP from NRP_LearnSkillList.

4/15/2026 Ver.1.1.1

Added a setting for specifying the method name used by the EXP gauge.

3/20/2026 Ver.1.1.0

Added battle time display, a variable for storing battle time in seconds, and display of obtained SP for Skill Tree.

3/12/2026 Ver.1.0.1

Added APNG support (actor images inside windows are excluded).

3/7/2026 Ver.1.0.0

First release.

1. Overview

This is an extension plugin that changes the experience gauge displayed in the NUUN_ResultEx Experience Window to a circular gauge.

Select Experience Gauge or Experience Circular Gauge in the item settings to use a circular gauge.

This plugin configures the gauge radius, gauge thickness, label display, value/label coordinates, gauge display mode, and gauge images. Configure the other settings in NUUN_ResultEx.

To use images, set [Gauge Display Mode] to [Image].

2. Plugin Parameters

Item	Description
Gauge Radius (When No Image Is Specified)	Specifies the gauge radius.
Gauge Thickness (When No Image Is Specified)	Specifies the gauge thickness.
Show Label	Displays the label.
Gauge Display Mode	Selects Normal or Image as the display mode.
Value X Coordinate (Relative)	Specifies the X coordinate of the value.
Value Y Coordinate (Relative)	Specifies the Y coordinate of the value.
Label X Coordinate (Relative)	Specifies the X coordinate of the label.
Label Y Coordinate (Relative)	Specifies the Y coordinate of the label.
Background Gauge Image	Specifies the background gauge image.
Gauge Image	Specifies the gauge image.
Foreground Gauge Image	Specifies the foreground gauge image.
Label Image	Specifies the label image.

Log

6/3/2026 Ver.1.0.0

First release.

1. Overview

This is an extension plugin for NUUN_ResultEx that hides specified windows or sprites while the result screen is displayed.

Use this plugin for windows or sprites that are not hidden by NUUN_ResultEx. Specify the object variable of a window or sprite in Scene_Battle.

Depending on the plugin, NUUN_ResultSpriteHideEx may need to be placed below the target plugin.

2. Plugin Parameters

Item	Description
Windows/Sprites Hidden During Results	Specifies the object variables of windows or sprites in Scene_Battle to hide during results. Multiple entries can be specified.

Examples

Value	Target
_statusWindow	Battle Window
_actorImges	Battle Style Extension Battle Window
_actorStatus	Battle Style Extension Battle Window
